

Project InVision International targets Professional Service Firms with Project InVision 8

New release of on-demand project delivery solution extends capabilities in application branding, status reporting, and dashboards

NOVATO, CA - October 10, 2007

San Francisco Bay Area-based Project InVision International (PII), a leading provider of on-demand software solutions, announced today the availability of Project InVision version 8.0, a new release of their Software-as-a-Service (SaaS)-based project delivery solution.

Project InVision 8 enables firms to automate a consistent and repeatable delivery process to increase efficiency, improve management visibility, and better utilize resources. As a result, professional service firms worldwide have improved customer satisfaction and realized a competitive edge, leading to increased sales and margins. The powerful new features in the Project InVision 8.0 include:

- **Application Branding** - Alliance partners and customers can now deliver custom solutions on the Project InVision platform including customer logos and application branding.
- **Enhanced Status Reporting & Dashboards** - Customers can now leverage Microsoft SQL Server 2005 Reporting Services to unleash enhanced capabilities in the area of status reporting and dashboards.
- **Technology Enhancements** - Significant efforts have been expended to provide compatibility with the latest platform technology enhancements from Microsoft, including Windows Vista, Internet Explorer 7, and SQL Server 2005.
- **Miscellaneous Enhancements** - Project InVision version 8 includes hundreds of minor enhancements to improve the usability, stability and performance of the system.

The Project InVision SaaS-based project delivery solution consistently achieves the industry's fastest deployment times, enabling customers to focus on their strategic initiatives rather than laboring over the implementation of their project management system. Project InVision 8 breaks down the barriers associated with enterprise software deployments offering affordable subscription pricing and immediate availability to save companies hundreds of thousands of dollars in licensing and start-up costs.

"Prospective customers have grown wary of traditional enterprise software systems with their high cost of entry and long implementation cycles," comments Andy Shotz, President of PII. "They are migrating toward Software-as-a-Service (SaaS) to reduce risk and realize immediate return on their investment."

About Project InVision International
