

Project InVision International announces Project InVision 2012

New release of leading portfolio and lifecycle management software platform

NOVATO, CA – January 18, 2012

San Francisco Bay Area-based Project InVision International, a leading provider of on demand software solutions, announced today the release of Project InVision 2012, a new version of their portfolio and lifecycle management software platform.

The Project InVision platform enables professional services and other service delivery firms to adapt and deliver customized portfolio and lifecycle management solutions. These solutions help businesses to automate consistent and repeatable processes, increase efficiency, improve visibility, and better utilize resources.

The powerful new features in Project InVision 2012 include a new portfolio Gantt report, larger and scalable detail forms, and calculated date fields. We've also enhanced our reporting engine to support additional report formats and improvements to our document management system to better integrate with other content management platforms. The release also offers a series of technology enhancements to support the latest platform releases from Microsoft including Windows 7 and Internet Explorer 9. Lastly, the release includes additional enhancements and fixes, based on customer input, to improve the overall usability, stability and performance of the platform.

"The enhancements in Project InVision 2012 put even more solution building power in the hands of our platform customers," says Matthew B. Meblin, CEO of Project InVision International, "Firms can now deploy highly powerful, custom Web-based solutions, on demand, in just a few short hours, without programming."
